Shipping season begin after May 15, 2012 and continues until around June 30th or later depending on availability.

Please allow up to two weeks from the time we receive your order and shipping.

Sweetpotato Plants 2012

People who have never grown some of the Heirloom sweet potato varieties are missing out on some of the tastiest varieties. The reason these are not commercially available is that some varieties will produce more and commercial growers are able to get more bushels per acre. The standard variety is Beauregard. Below is a list of varieties we are supplying this year and while some are standard, others are novelty.

American (Yam) varieties usually have moist flesh; Asian varieties usually have dry flesh. Orange fleshed varieties usually are moist. Light yellow/white fleshed varieties usually are dry flesh.

Also note that true Yam (which is a completely different species of plant native to Africa) is not grown commercially in the US.

We can not offer large order discounts on the following varieties. If you need large numbers, please see our wholesale price list,

8633 SLOW TO SPROUT

Red/orange skin, deep orange flesh. vigorous growing, compact plants, great producer of large, fat, sweet potatoes, very sweet orange flesh. An excellent variety.

Pox and nematode resistant. Leaves and vine tips are edible too, used much like spinach. Early type Slow and shy slip producer so don't expect early shipment.

Alabama Purple (PURPLE DELIGHT) purple sweet potato renamed Purple Delight

We recently acquired this new trial variety that originally came from Alabama. It is Purple fleshed with dark purple skin. Flavor is typical to the other purple fleshed varieties, which is not real sweet.

Allgold (Oklahoma 1953)

Early. Vigorous vines, tan-yellow skin with pale orange flesh, heavy yields. Equal if not superior to Porto Rico in taste and table appearance and contains 50% more vitamin C and more than 3 times as much vitamin A. Developed by Dr. Cordner, Oklahoma A & M College.

Beauregard

Orange skin, orange flesh. Thin stalks, vigorous grower, good producer, fat & heavy sweet potatoes. A typical "yam" type you find in stores. Has pox and nematode resistance. Early type

Bunch Porto Rico

Mid-season. Regular leaf, yellow-orange skin and flesh. Needs long season to do well. Bush type, great for smaller gardens.

Carolina Nugget (North Carolina)

Roots short, blocky with rosy skin. Flesh medium orange. Roots have good table quality. Leaves deeply cut, dark green with a purplish tinge. Increased yields and superior root shape in heavy soils. Needs less curing to store well than other cultivars. More resistance to fusarium wilt and southern root knot than Centennial

Carolina Ruby

Favorable with Beauregard and was superior to Jewel. Yield similar to Beauregard for the U.S. #1 and canner grades and slightly higher for jumbo grades. Harvest dates typically 3-5 days earlier than Beauregard. Roots store well without excessive weight loss from storage roots or dehydration. Baked roots have uniform color, and moist smooth flesh, and good flavor.

Cordner's Red (heirloom type)

This is a very compact bush type plant with red skin and orange moist flesh. Excellent for people with small gardens. The name "Cordner's Red" was given by local growers as it was never officially released. From the breeding material of Dr. H. B. Cordner of Oklahoma. Fair storage variety and great tasting. A personal Favorite. One of our top producers in 2010. Early type

Hatteras (North Carolina) Sold out e check back

An orange-fleshed, smooth-skinned, rose colored, table stock sweetpotato. The leaves are typically green and triangular shaped, and the vines produce a dense canopy that competes well against weeds. Hatteras normally produces uniformed shaped roots high yields are normally harvested in 110 days.

Hernandez (Louisiana 1990)

Mid-season to late. Vigorous vines, orange skin, dark orange flesh. Very moist when cooked, above average yields. This was one of our best producers in 2010.

SWEET POTATO SLIPS/PLANTS

Jersey White

White skin and creamy white flesh. Light and delicate sweetpotato flavor. Very similar to Hammond White.

Jewel

Mid-season. Semi-bush, greenish colored normal leaves, above average yields, tends to produce medium sized roots regardless of the season length. Has light orange skin with light orange flesh, Sweet, Moist flesh.

Mahan / Bradshaw (heirloom)

Mahan was renamed Bradshaw in 2010, Heirloom variety High production and excellent storage. Very sweet, Moist, Orange Flesh. Ivy leaves with semi compact vines. Looks very similar to Continental Red. Highly recommended

Okinawa Purple (Very Limited). **SOLD OUT TILL**

JUNE Light beige skin, deep dark purple flesh. Flesh gets darker and deeper purple when cooked. They are surprisingly sweet when cooked. Pretty foliage plant as well. Slow grower. Needs a VERY long, hot growing season. Preferably 140 days or longer. Originally from Japan..... Attention: we only recommend these for trial, as they are not high production and very long season and not adapted to all of the US.

Porto Rico, Running or vining type

Eating quality superior. Flesh color apricot. Skin color copper. Average yields. One of the most recognized and popular varieties

Vardaman

Compact Bush type habit. Root skin color very light but changes to rose or copper when exposed to light. Roots tend to be long and skinny. Flesh deep orange. Yield equal to Centennial or Jewel. Excellent storage life. Excellent Canning and baking characteristics

More Varieties Listed At End

25 plants \$12.00 (2 varieties)

50 plants \$20.00 (3 to 4 varieties)

100 plants \$32.00 (5 or more varieties)

All varieties will be labeled

SWEET POTATO SLIPS/PLANTS

Un-rooted Cuttings. (URC)

An Un-rooted Cutting is essentially a slip that is cut above the root line. Sweetpotatoes are so easy to root, that it is possible just to plant out and keep moist for a few days to start rooting. The bottom two to three nodes can be placed in water for two or three days to begin the rooting process then planted out. Try to plant on a cloudy day or provide some shade for couple of days to help them get established. If they appear to die, give them time as the stem below the soil will usually produce more shoots.

Not sure what to order and like surprises?
We offer the following assortments.
These will be our choice of varieties.

Short Season assortment

A mixture of some of the earliest maturing varieties we have
12 plants \$7.50 (2 varieties). 25 plants (3 or more varieties) \$12.50, 50 plants (3 or more varieties) \$24.00. 100 plants (3 or more varieties) \$45.00

General Assortment

A mixture of different colors, skin and flesh
12 plants (2 varieties) 7.00, 25 plants (3 or more varieties) for \$12.00. 50 plants (3 or more varieties) \$20.00, 100 plants (4 or more varieties) \$32.00.

White/Cream Flesh Assortment,

Mixture of white types
12 plants (2 varieties) for \$7.50 25 plants (3 or more varieties) for \$14.00, 50 plants (3 or more varieties) \$22.00, 100 plants (3 or more varieties) \$35.00

Orange Assortment

Mixture of orange and or yellow fleshed varieties
12 plants (2 varieties) for \$6.00, 25 plants (2 to 3 varieties) for \$12.00, 50 plants (3 or more varieties) \$20.00, 100 plants (4 or more varieties) 32.00.

All of the assortments are Grower's (Our) Choice and may contain varieties not listed here. Shipping applies

End of Season Special.

Shipped after June 20, 2011

This is growers (our) choice ONLY

25 slips \$7.50 plus shipping. 2 or more varieties
50 slips \$15.00 plus shipping. 3 or more varieties
100 slips \$30.00 plus shipping. 4 or more varieties
All varieties will be labeled

We will respond to email questions, but please be patient as we are very busy during the growing season. We will try to dedicate one day a week for phone orders. Watch the Updates and Availability for day and time.

SWEET POTATO SLIPS/PLANTS

ATTENTION

We are suspending sales of most Specialty Varieties until we get the pre-orders shipped. We will list available varieties in the Availability/Updates Section later

The following varieties are only listed on our online catalog and are not listed in our printed catalog. They are all VERY limited. Please try and limit the number you order of each. We will not limit the number you can order, but after we receive orders for 100 (plants) each we will suspend the availability until we know we will have sufficient numbers to re-list. So please check the availability before ordering. These are grown in very low numbers so we can not offer large number discounts.

Specialty Sweet Potato Varieties

Below are some of the older releases, heirlooms or hard to find varieties we have in limited quantities. All the below varieties are **\$1.00 each no matter how many you order with a \$5.00 minimum per variety.** We do not limit the number of plants you can order, however, if you plan to order more than 10, please [email](mailto:info@duckcreekfarms.com) first to make sure we have enough. Most are very limited. You can also check our [Availability at http://duckcreekfarms.com/pdfs/SweetPotato_Availability.pdf](http://duckcreekfarms.com/pdfs/SweetPotato_Availability.pdf)

Acadian (Louisiana 1956) **OUT**

Copper Skin with deep orange moist flesh. Produces an early crop and does well in late plantings. Good Storage. Good baking and canning qualities.

Apache (USDA 1959) **OUT**

Skin and flesh color orange. Yields moderate to high. Stores well. Baking quality very good. Mid Season

Arkansas Red (heirloom type) **OUT**

Early. pink/red skin, orange flesh, good yields

Asian Greens Variety **SOLD OUT CHECK BACK**

We received this variety from an Asian grower that grew them for greens, we do not know the type of roots it makes yet or the real name, but the vines were very good cooked liked spinach.

B-18 (Canada 1960's) **OUT**

Reported to produce in cool, short summer areas. light orange skin and orange flesh.

Barberman (heirloom) **OUT**

Orange skin and flesh. Early to mid season with good production

Butterbaugh White (Heirloom) **Not Available**

White skin and flesh. Very late for us this season average yields.

Betty's (Heirloom Type)

Early Production. Semi-bush growth habit. Reddish skin and orange flesh similar to Continental Red. Good Yields.

Brazilian (Heirloom type)

Mid-season production. Very vigorous vines, green colored normal leaves, white skin, white flesh, good yield.

Brinkley White (Heirloom Variety) **OUT**

Mid-season. Vigorous vines, green colored normal leaf, creamish-white skin, cream colored flesh, excellent yields. A very popular variety

Bugsbunny (Porto Rico) **OUT**

Reported to have high carotene. Orange flesh, good yields. I haven't determined the maturity, but would speculate mid season.

California Gold **OUT**

Early. Pale orange skin with orange flesh. Roots tend to be long. Grows well on heavy soils. good yields

Carolina Bunch (South Carolina 1992) **OUT**

Mid-season. Semi-bush, orange skin, light orange flesh, good yield

Carogold (South Carolina 1958) **NOT Available**

Early. Thin, rampant vines, purple skin, orange flesh.

Carver (Alabama) **OUT**

Skin color rose. Regular leaf. Flesh moist, deep orange Excellent storage. Good canning and baking qualities. Highly resistant to fusarium wilt. Intermediate resistance to southern root knot nematode. Suited for both fresh and processing market.

Centennial (Louisiana 1962)

Early production. Semi-bush, normal leaf, copper skin, pale orange flesh, long, skinny roots, High carotene, adapted for heavier soils, above average yield

Charleston Scarlet (USDA 2006) **NOT Available**

Produces orange-fleshed, sweet roots with attractive scarlet-colored skin. Its high level of insect and nematode resistance may be very beneficial for organic farmers and home gardeners who typically do not use chemical pesticides. Good production. Mid season.

Cherokee (South Carolina 1965)

Roots blocky, outstanding smoothness. Skin color bright copper. Flesh orange. Excellent baking quality. Good keeping quality. Long thin vines, rampant grower.

SWEET POTATO SLIPS/PLANTS

Chesapeake formerly MD-253 **OUT**

Orange skin and flesh. Early production with good yields.

Continental Red (heirloom type)

Early. Semi-bush, green colored ivy leaf, pink-red skin, light orange flesh, above average yield. Very similar to Mahan. This is probably the same variety sometimes sold as Betty's, Ginseng Red, Gold Nugget, or Lace Leaf

Cordner (Oklahoma/Texas 1983) **OUT**

Bronze/Copper Skin and moist orange flesh. Excellent baking and canning quality. Good Yields.

Creole (Louisiana ca 1940's?)

Tanish/cream skin with cream flesh. Needs about 100 days to mature. Expect Average yields

Crystal White **OUT**

Mid-season. Cream-white skin, cream flesh, above average yields.

Darby very limited for 2012 **OUT**

Characteristics similar to Beauregard but with potential for earlier and improved production in sandy soils.

Dianne/Garnet

This is also sold as Garnet. Red skin, Fat stalks, vigorous grower, sweet, dark orange flesh, torpedo shaped sweetpotatoes, good producer. Interesting ivy leaves make a good ornamental plant or ground cover too.

Edna Evans (Heirloom type) **Not available for 2012**

Mid-season. Vining growth habit, salmon colored skin, orange flesh, average yields.

Eureka (Louisiana) **OUT**

Roots well shaped, tapered at both ends, smoother exterior than Jewel. Skin copper. Flesh deep orange. Good storage cv. Good baking and canning characteristics.

Excel (South Carolina 1989) **OUT**

Early maturity. Vigorous vines, normal leaf, large, roots, light copper skin, pale orange flesh, Stores well. Excellent baking and canning qualities. Expect above average yields.

Garnet see Dianne

Garnet Red **OUT**

Garren's Red & White (heirloom) **OUT**

Vining habit, Late production with red skin and white flesh similar to Spanish Red, average yields

Gem (North Carolina 1964)

Light Orange skin and flesh. Moist/Sweet texture. 110-120 day maturity. Expect above average yields.

Georgia Jet **SOLD OUT**

Root shape short spindle. Skin color purple-red. Flesh light orange. Earliness 90 days under good conditions. Storage satisfactory. Good or excellent baking tests. This variety is very prone to cracking in dry conditions.

Georgia Red (Georgia 1955) **OUT Check Back**

Georgia Red is a selection from a cross of Porto Rico. It has a reddish/orange skin and orange flesh with a soft/moist texture. Excellent keeping and eating quality. While we try and select the reddest color skinned roots for our seed stock, the color will vary from reddish to orangish-tan. Excels as a baking potato. It a mid to late season variety and will need in about 120 days to mature. Expect Average Yields, though it was one of our biggest producers in 2011

Georgia Yam (Heirloom Type) **OUT**

Early production. Copper-orange skin, orange flesh, very good yields.

Golden Sweet **SOLD OUT CHECK BACK**

Beige skin, light yellow flesh. Very vigorous, a quick growing and high producer of heavy-set typically shaped sweet potatoes. Great tasting white-type variety. Mid-season

Grand Asia New for 2012

Purple skin with white flesh. Dry type

Hannah (Unknown)

Cream/white skin and flesh. Average Yield, mid season

Heartogold very limited for 2012

Light tanish skin with orange flesh

Ivis White Cream (Heirloom Type) **OUT**

Early production. cream skin, cream flesh, uniform roots, expect above average yields

Jasper (Louisiana) new for 2012 **OUT**

Root skin color bright copper. Flesh orange. Produces a large percentage of marketable grade roots. As early as or earlier than Centennial. Has about twice the carotene content of Unit I Porto Rico.

Jubilee (Unknown Origin) **OUT**

Early production. Vining growth habit, regular leaf, cream colored skin, cream colored flesh, above average yields

Korean Purple (Heirloom of unknown origin) **SOLD OUT**

Early maturity. Vining habit, dark green leaves, purple skin, with very sweet, white flesh, excellent yields.

Liberty (South Carolina 1993) **OUT**

Liberty is a Boniato-type sweetpotato that exhibits multiple resistances to insects and nematodes. These resistances and its attractive storage roots with a scarlet skin color and cream flesh color make Liberty a desirable cultivar for markets that prefer a dry, mild-flavored sweetpotato. This cultivar is also suitable for organic growers and home gardeners.

Mary Rebecca (Virginia Heirloom) **OUT**

Mid Season. white skin, pale yellow flesh, heavy producer, vining growth habit

Maryland Baker formally MD 7-93 **OUT**

Orange skin, orange flesh, productive, Early

Maryland Supreme formally Maryland-810 **OUT**

Early production. red skin, deep orange flesh, above average yields. Very moist sweet flesh. Good Yields

SWEET POTATO SLIPS/PLANTS

Maynard Family White New for 2012
Late. Vigorous vines, white flesh, white skin, average yield

Mildred Cooper (Heirloom Type) **OUT**
Late production. Vigorous vines, cream colored skin, white flesh, rough shaped roots with average yields

MD-7-93 see **Maryland Baker** (Maryland) New for 2012 **OUT**

MD-253 (Maryland) See **Chesapeake** New for 2012 **OUT**

Memphis Pride (heirloom) New for 2012 **OUT**
vining, pinkish skin, light orange flesh, above average yields, midseason, very similar to Betty's

Nemagold (Oklahoma 1958) **OUT**
Mid-Season Production. Roots cured and stored for a short time are sweet, soft, and moist when baked. Flesh orange. Skin gold. Carotene high, similar to Allgold. Good Yields

Norton (heirloom from NC) New for 2012 **OUT Check Back**
Cream skin with white flesh, very productive. Reported to be over 100 years old.

Nugget (North Carolina 1961) New for 2012 **OUT**
Roots very uniform, smooth and tapered on both ends. Skin copper. Flesh color medium-orange. Production satisfactory. Keeps well in storage. Excellent processing qualities. Satisfactory baking qualities.

O'Henry
Early. cream white skin, white flesh, uniform roots, above average yield. A white sport of beauregard.

OK 8-85 (Oklahoma) see **Oklahoma Nugget** **OUT**

Oklahoma Nugget formerly OK 8-85 **OUT**
Orange skin, Orange flesh. Vining growth habit, average yield

Oklamar (Oklahoma 1957) **OUT Check Back**
Tanish-salmon skin with sweet moist light orange colored flesh. Good yields

Old Kentucky (Heirloom type) **OUT**
Large white skinned tubers with ivory/cream colored flesh. Mid season production. Rough looking roots, but good flavor. Average Yields.

Old Orange (Heirloom) **SOLD OUT**
Mid-season. Orange skin and deep orange moist flesh.

Papota (Porto Rico 1985)
Skin cream, white flesh. Turnip shaped roots. Very bland non sweet. High yields. Early to mid season production

Patriot (South Carolina 2001) New for 2012 **OUT**
Red/orange skin, orange flesh. Good production, early maturity.

Pense Red (heirloom) new for 2012 **OUT**
Early. Semi-bush, ivy leaf, reddish skin, pale orange flesh, good yield

Pope (North Carolina 1981) **OUT**
Early to mid season maturity. Flesh medium orange. Skin; light salmon. Expect above average yields.

Pumpkin Yam (Heirloom Type) **SLOW TO SPROUT**
Light Orange skin and moist orange flesh. Expect good yields and early maturity. This one is listed by George Washington Carver in 1936. Slow to sprout, so don't expect early shipment.

Purple **VERY LIMITED (Sold Out, Check back later)**
Substitute Alabama Purple
Deep purple skin with, dark purple flesh. Pretty foliage plant too. Purple stems with green regular leaves. An unusual flavored variety that is gaining much attention

Qualls (Virginia Heirloom) **OUT**
Mid-season production. pale tan/orange skin, creamy orange flesh, average yield. Good on heavy soils

RedCliff (South Carolina 1968) **OUT**
Mid-Season maturity. Roots blocky, red-skinned. Flesh deep, uniform, salmon. Baking quality good to excellent. Canning quality good. Moderately good disease resistance. Good Yields.

Red Ivy Leaf (heirloom of Unknown Origin) **OUT**
Early production with Semi-bush growth habit, pink skin, light orange flesh, Expect average yields.

Redgold (Oklahoma 1953)
This was the second most popular variety grown in Oklahoma in the 50's and 60's and is a high yielding fresh market type developed by Oklahoma State University. It has reddish or copper-skin color and salmon-orange flesh color. Flesh is moist, canning quality poor, storage life fairly good

Red Jewel (Georgia) **SOLD OUT**
Pinkish/Red skin color with orange flesh. Rated good for canning. Baking quality good to excellent. Good Storage. Early to Mid season maturity

Red Wine Velvet (Heirloom type)
Mid-season. Average vines, deep red skin, Very smooth, sweet, moist, orange flesh, and average yield. A very popular variety that usually sells out fast. Slow to sprout so don't expect early shipment.

Red Yam (Not Available at this time)
Reddish skin and moist orange flesh. Expect early, above average yields. Semi-Bush habit.

Red Resisto **OUT**
Similar to resisto only with red skin. Good production

Regal (South Carolina 1984) **OUT**
Red Skin with dark orange flesh which may be lighter in some environmental conditions. Excellent Baking flavor. Expect High Yields. Late Maturity

SWEET POTATO SLIPS/PLANTS

Resisto (South Carolina 1983) **OUT**

Skin reddish copper. Flesh dark orange. Yields equivalent to Jewel. Baking & canning qualities similar to Jewel. Average yields

Ringley's Porto Rico (Heirloom type)

Early production. Vining growth habit, pronounce Ivy leaves, cream to tan colored skin, apricot flesh. Expect average yields.

Rojo Blanco (Alabama 1977)

Dry flesh type. Heavy yields. Skin deep red. Flesh color milk-white.

Rose Centennial

Rose colored tan skin, medium orange flesh, average yield.

Scarlet (North Carolina) **SOLD OUT**

Roots tend to be more cylindrical and slightly longer than Jewel roots. Skin red. Flesh orange. Roots remain sound in storage for 7 or more months. Judged superior to Jewel in baking trails.

Shore Gold (Virginia 1987) **OUT Check back**

Early, widely adapted, high yielding. Excellent baking quality. Roots uniformly fusiform to blocky. Skin light copper, smooth. Internal root color bright orange. Stores well. Well-suited for baking and canning. High yields. Semi-bush habit

Southern Delight (South Carolina 1986) **OUT Check Back**

High yield. Baking flavor excellent. High levels of resistance to a wide array of disease and insect pests. Skin rose to dark copper depending on soil type. Marketable yields comparable to that of Jewel or Centennial. Stores slightly better than Jewel. Baking and canning qualities average similar to Jewel or Centennial

Speckled Purple **very limited OUT Check Back**

Reddish purple skin, Bright magenta and purple flesh with white speckles. Good producer.

Sumor (South Carolina 1984)

Early. Vining, cream white skin, white flesh, average yield Bland type that makes a good substitute for white potatoes.

Sunnyside (USDA 1953) **OUT Check Back**

Mid season production. Skin tan. Flesh salmon to orange. Shape short tapered, relatively smooth. Size medium. Baking quality good. Excellent keeper in storage. Good Yields.

Tainung 65 (Taiwan) new for 2012

Early-mid season. Dark pink skin and yellow flesh, good production.

Topaz (Texas) New for 2012 **OUT Check Back**

Flesh medium orange. Skin smooth, bronze, good production, early to mid season maturity

Travis Developed by Louisiana (LSU) 1980 **OUT Check Back**

Rose skin and deep orange flesh, early maturity, high yield. Resistance: fusarium wilt, root-knot, internal cork, and soil rot

Vietnamese (Heirloom)

Early. Spreading growth habit , Ivy leaf, reddish/orange skin, orange flesh, good yields

Violetta (Heirloom of unknown origin) **OUT Check Back**

Purple/Red skin with sweet white flesh. Early Maturity. Expect above average yields.

W-392 (South Carolina 1997) new for 2012 **OUT**

Bright orange skin with orange flesh. Mid season

Wakenda (heirloom) new for 2012 **OUT Check Back**

Early. Vining, pinkish skin, dark orange flesh, good yields

Wilma's (heirloom) new for 2012 **OUT**

Orange skin, pale orange flesh, good producer with early-mid maturity,

White Bunch (Unknown Origin) **OUT**

Russet cream skin with cream flesh. Very good production of uniform roots. It is reported to have moist flesh; however, we haven't tasted it yet.

White Jewel **OUT**

Mid-season., regular leaf, dark pink/red skin, white flesh, average yield

White Yam (Heirloom) new for 2012 **OUT**

Mid-season. Vining, white skin, creamy-white flesh, good yields

Please keep in mind that our experience may not duplicate yours. We had a crop failure in 2011 on Camote Morado, however, Glenn Drowns of Sand Hill Preserve reported excellent yields. We had a similar crop failure on Heartogold due to our weather, but our grower Friend Jack Osman from Pennsylvania reported a bumper crop. So Sweetpotatoes can and will perform differently from year to year and in different parts of the county depending on the weather.
